# Instructional Guide: How to update your eSight 4

## Get started in 4 easy steps

**Please Note:** Before you can update your eSight 4 make sure your device is connected to WiFi and your battery is over 40% charged. You can find instructions on how to connect to WiFi at <https://esighteyewear.com/support>

1

Make sure your eSight 4 is charged, connected to WiFi, and the remote is connected to the device.

You can check this by using the volume button on the remote control to display the view as pictured to the left.

2

Once your device recognizes that an update is available, you will see this dialog: "A new eSight software update is available. It may take several minutes to install and will require restarting the eSight." Select **Okay**.

3

The update will install in the background, taking about 6-7 minutes. At this point, you can continue to use your device. Once completed, you can choose to **Restart** your eSight to finish installing the update or press **Cancel** for the update to appear the next time your device restarts.

4

Once your device reboots, you will see a final message saying: Your eSight is up to date.

Select **Okay**. You'll now be using the most up-to-date version of eSight 4.
