

## Instructions For your Handheld Magnifier

### General

Do not leave the magnifier in the sun and do not look at the sun through the magnifying lens, as this could damage your eye.

For any magnification 5x or greater, hold the magnifier under 4" away from what you are trying to magnify otherwise the image will not appear correctly.

### Safety

The light used in your magnifier is exceptionally bright. This should help you see your best but do not look directly at the magnifier's light.

### Cleaning

When cleaning the lens, rinse with warm water first. If needed, liquid household soap can also be used—do not use chemicals. After rinsing the lens, dry it with a soft, non-abrasive cloth. Dry the lens gently, so as not to scratch it in any way. Please be careful not to get the battery handle wet. Please do not rinse the 3X or 3.5X magnifier in water. Only use a damp, soft and non-abrasive cloth to clean the magnifier.

### Storing

Keep the magnifier in the case when not in use for safe keeping.
