

**Many advantages over previous models**

- **Higher Resolution Displays** - twice the resolution with over 2 million pixels per display
- **Even wider Field of View** - 45-55 degrees for even better retina coverage
- **Improved Image Quality** - higher frame rates make for a more dynamic real-life image
- **Faster Processor** - enables more software and algorithmic-based features
- **New User Interface** - a graphical, cell phone-based, user interface designed for low vision users
- **Advanced Software Features** - advanced image stabilization, as well as more customizable features for greater image enhancement and adaptation

# EYE4
