

Mercury 13

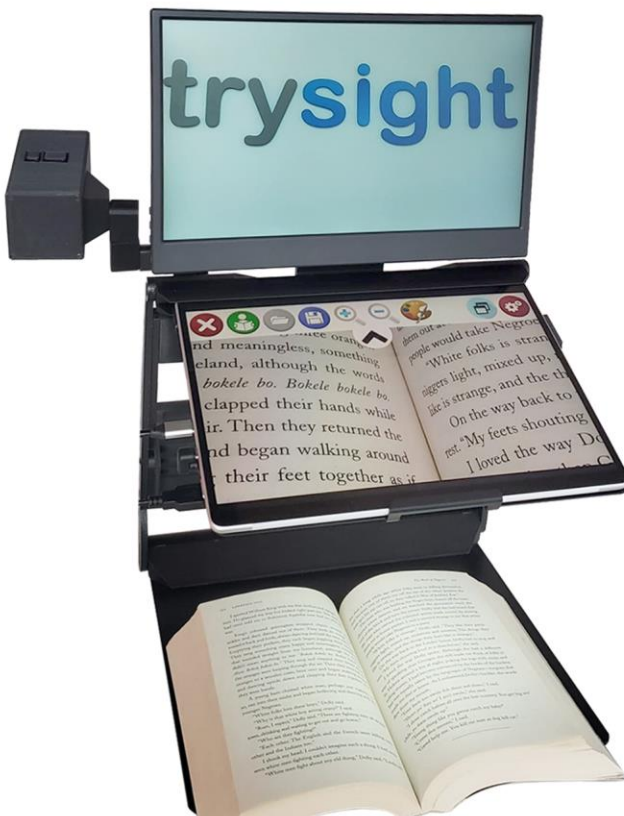

Low Vision Computer System

See things near, far and on the computer

The Mercury 13 is a lightweight, compact, Windows Tablet based System specifically designed for the visually impaired. The Mercury 13 is a complete laptop and CCTV replacement, which means there is only one device to take notes, see the whiteboard, access the web or read physical documents!

All in one low vision system

The Mercury 13 is a complete low vision system designed to replace a laptop, a magnifier and an OCR device. Its powered by the latest Microsoft windows tablet, the Surface Pro 8 with a large 13-inch screen to maximize viewing area. It folds into a compact size and fits into a laptop sized bag for maximum portability

Listen to printed text and documents

The Mercury 13 includes highly accurate OCR to convert the printed word into spoken text. Documents can be stored and retrieved later to be spoken aloud in a variety of voices and languages. Various reading modes allow for the best possible experience.

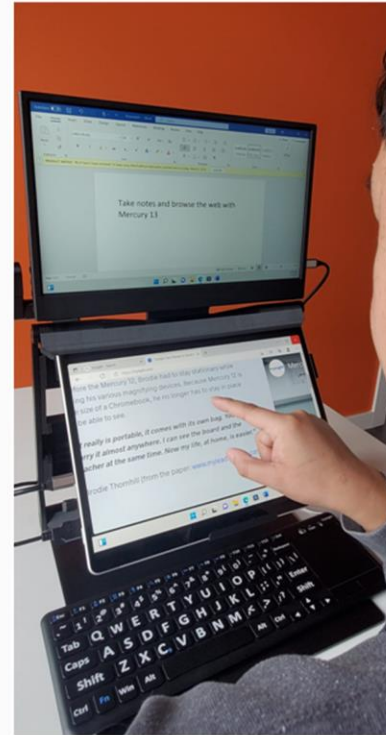

Integrated USB Hub and LED

The Mercury 13 has an integrated USB Hub for peripherals such as thumb drives and a bright LED to illuminate documents being read in a low light environment. No separate charging or cables are required as everything is powered by the tablet's own battery using an integrated USB cable. This means there is only one device to charge and fewer wires to carry.

Dual Monitor

The Mercury 13 doubles screen real estate by adding an optional second screen on top. The lightweight screen can be angled for viewing comfort and is powered by a single cable connected to the tablet's USB-C Port, which means no wall outlet is needed.
