Vision Buddy VB4 Max

Enhancing lives through clearer vision

What is Vision Buddy?

The Vision Buddy VB4 Max is a wearable device designed for low vision individuals. With reading mode, magnification mode and tv mode this helps low vision individuals gain back their independence.

What does it do?

Using a Sony camera, and magnification technology, you can zoom up to 10x. This makes reading, playing board games, and watching outside sporting events enjoyable.

How does it work?

The VB4 Max is a wearable device powered by a Sony camera for magnification and reading modes. TV mode is connected via transmitter to the device you want to stream, and then displayed wirelessly to the headset.

How do I use it?

Using the TV hub transmitter provided, connect it directly to your cable box, or streaming service to watch directly in your headset. You can also use magnification or reading mode with easy to use zoom in and zoom out buttons.

Who can use it?

The VB4 Max was designed to help low vision individuals feel more independent and provide a better quality of life. The headset itself has an adjustable IPD to better assist many different eye conditions. The device can work with visual acuity of 20/100-20/800.
